BUANDERIE IB: AN EFFICIENT, COST-EFFECTIVE WATER TREATMENT SOLUTION

THE CONTEXT

COMMERCIAL LAUNDRY PROJECT

Client Name: Buanderie IB /
Isabelle Boulay

Industry: Commercial laundering of linens, coats, and bulky items for hotel clients

Facility Type: Leased commercial space

Project Start: September 2025

Final Installation: October 28, 2025

Overcoming Commercial Laundry Water Challenges

Isabelle Boulay, owner of Buanderie IB, contacted Puribec to address a critical operational issue: her hotel clients' linens were coming out stained due to incoming water quality. Additionally, her facility experienced repeated breakdowns of water heaters connected to the municipal network. The objective was twofold: improve laundry output quality while reducing equipment downtime and protecting capital assets.

Le mandat présentait également deux contraintes importantes : le très grand volume d'eau requis pour les opérations de lavage et l'espace restreint disponible pour l'installation. La solution devait donc être à la fois performante, adaptée à un fort débit et compatible avec la configuration du site.

The Puribec Solution for Guaranteed Water Quality

A Puribec specialist conducted an on-site technical assessment to evaluate the facility's needs. From validating spatial constraints and technical specs to managing the project end-to-end, Puribec delivered a turnkey experience. The recommended system combined Kinetico Hydrus soft-

- Visible improvement in wash quality: stain-free and softer linens.
- Increase in the lifespan of fabrics washed in soft water.
- Protection of water heaters, washers, and auxiliary equipment over the medium and long term.
- Reduced detergent consumption.
- Complete removal of a strong, highly acidic stain remover that previously mandated protective gloves and eyewear.

The Peace of Mind of Working with a Trusted Supplier

I was already acquainted with Puribec, as they had installed effective systems for some of my clients. I received excellent service, and the team managed the project from A to Z. My advisor answered all my questions with authority and clear technical expertise. The equipment was installed properly, and staining issues are practically eliminated.

- Isabelle B, owner of Buanderie IB

tener technology with Puribec's Gold Controller—the ultimate pairing for high-flow commercial laundries operating in limited space.

The Kinetico Hydrus HS 324 S Point-of-Entry Water Softener System is designed for scale and hardness reduction with a peak flow rate of 195 gallons per minute. By utilizing counter-current regeneration, it eliminates motor dependencies and maximizes machinery longevity, ensuring a reliable, continuous supply of softened water for commercial standards.

The Puribec Programmable Multifunctional Gold Controller offers precise management of water treatment equipment. It tracks key performance data—including volume of treated water and active filtration cycles—which is critical for monitoring high-demand, continuous operations.

Performance Results of a Custom Puribec Solution

- Up to 30% reduction in wastewater and up to 40% reduction in salt consumption through counter-current soft water regeneration.
- Reduced operating costs for the commercial laundry.
